OVIDIU SUCIU

Full-Stack Developer & AI/LLM Integration Engineer

ovidiu.suciusoc@gmail.com +40 771 440 283 Cluj-Napoca, Romania
ovidiu-suciu-cristian socovidiu my-website

PROFILE

- Full-stack developer with experience building modern web applications using React, TypeScript, Node.js, .NET, and FastAPI; strong focus on clean architecture, modular design, and scalable backend systems.
- Hands-on DevOps practitioner with experience in containerization, CI/CD pipelines, GitHub Actions, Docker, Terraform, and Kubernetes; passionate about automation and cloud-ready deployments.
- Software engineer with 6+ years of experience across embedded and automotive systems, recently transitioning into modern web, cloud, and AI-powered application development.
- Experience building AI-powered applications, including multi-provider LLM integrations (OpenAI, Gemini, Anthropic).

PERSONAL PROJECTS

Resume Builder Platform – K8s Infrastructure

Kubernetes, Helm, Terraform, GitHub Actions, GCP

2025 GitHub

- Provisioned GKE and supporting cloud resources using Terraform; packaged each microservice as a Helm chart for repeatable deployments.
- Defined namespaces, ingress, secrets and workloads for frontend, API and LLM services, wiring them to a managed MongoDB instance.
- Automated build-and-deploy pipelines with GitHub Actions, pushing images to Artifact Registry and running `helm upgrade -install` into the target cluster.

Resume Builder API

.NET, MongoDB, Docker

2025 GitHub

- Built a .NET Web API providing REST endpoints for user management and CV CRUD operations backed by MongoDB.
- Implemented authentication and authorization ensuring users can only access and modify their own resumes.
- Containerized the service and added `docker-compose` for local development together with the frontend, database, and LLM service.
- Integrated with a separate LLM microservice via HTTP-based RPC endpoints to provide AI-powered resume feedback and suggestions; designed request/response models for structured prompt delivery.

Resume Chatbot LLM Service

FastAPI, LangChain, OpenAI/Ollama, Docker

2025 GitHub

- Developed a FastAPI microservice that exposes chat endpoints for AI-assisted resume feedback and suggestions using LangChain.
- Designed a configurable provider layer to switch between OpenAI and local Ollama models via environment variables without code changes.
- Used Pydantic models and automated tests to keep prompts, responses, and resume suggestions structured and reliable.

LANGUAGES

Romanian ●●●●●

English ●●●●●

STRENGTHS

Hard-working | Detail-oriented | Team player | Fast learner | Curious

TECHNICAL SKILLS

Programming Languages
Python | TypeScript | JavaScript | C | Bash

Frontend
React | TailwindCSS | HTML | Vite

Backend
FastAPI | Node.js | Express | .NET | REST APIs

Databases
PostgreSQL | MongoDB

DevOps & Infrastructure
Docker | Kubernetes | Terraform | GitHub Actions | CI/CD | Linux | Monitoring/Logging

Cloud Platforms
GCP (GKE, Cloud Run, Artifact Registry) | Azure AI Services

Runtime & Tooling
Uvicorn | Nginx | Docker Desktop

Development Tools
Git | VS Code | PyCharm

AI & LLM Systems
Multi-Provider LLM Integration | OpenAI | Gemini | Anthropic

Resume Builder Frontend

React, TypeScript, Vite, TailwindCSS, Docker

2025 GitHub

- Created a TypeScript React SPA for creating, previewing, and exporting professional CVs to PDF.
- Implemented dynamic forms with real-time preview backed by the Resume API; integrated Docker + Nginx config for containerized deployment.
- Added basic testing and linting (Vitest, ESLint) to keep the UI codebase maintainable.

Video Game Review Platform

Node.js, Express, React, TS, Tailwind, Docker

2025 GitHub

- Full-stack reviews app with JWT auth and RAWG API integration; backend designed with REST best practices and PostgreSQL indexing.
- Frontend built with React + TypeScript + Vite; multi-service setup containerized with Docker for streamlined dev and deployment.

EXPERIENCE

Junior Solutions Engineer

Global Lingo

from Feb 2026 Cluj-Napoca

- Developed a desktop AI voiceover generation tool using Azure and ElevenLabs APIs. Delivered a user-facing tool enabling efficient generation of voice content in real-world workflows
- Customized OpenAI, Google Vertex AI, and Anthropic Blackbird applications. Implemented prompt engineering, token management, and parallel request execution. Added structured output validation (XLIFF parsing, tag validation) to improve reliability and reduce hallucinations

Software Architect

AROBS Transilvania Software

May 2021 – Sep 2024 Cluj-Napoca

- Designed modular AUTOSAR-aligned architectures for safety-critical automotive systems (ASIL-B), defining OS task layouts, memory maps, reset flows, ports, and RTE interfaces.
- Led architectural design for sensor clusters and fuel-operated heater control units; implemented diagnostics, ECU management, communication handlers, and peripheral drivers.
- Ensured ASPICE Level 2 compliance through requirements traceability (Polarion - Rhapsody), structured documentation, and stakeholder technical reviews.
- Worked closely with cross-functional teams (HW, QA, systems engineering) to define design specs and integrate components into production ECUs.
- Tools: Rhapsody, Eclipse, Tresos, Davinci Developer/Configurator, Vector CANoe/CANape, ReqXChanger, EWM, Trace32.

Software Developer

AROBS Transilvania Software

Jul 2019 – Sep 2024 Cluj-Napoca

- Developed embedded automotive applications in C with a focus on safety, static analysis, MISRA compliance, and robustness for mission-critical ECUs.
- Implemented service modules such as watchdog management, transport protocol, diagnostic services, and data acquisition pipelines.

- Built prototypes on ARM-based platforms; integrated LiDAR and ultrasonic sensors for mobile robotics and computer-vision research initiatives.
- Conducted debugging and performance optimization, and supported early defect detection improving system reliability.
- Tools: Eclipse, Trace32, ASTREE, Vector CANoe/CANape, Linux scripting, Python automation.

EDUCATION

M.Sc. Integrated Communication Systems

Technical University of Cluj-Napoca

Sept 2019 – June 2021

B.Sc. Electronics, Telecommunications & IT

Technical University of Cluj-Napoca

Sept 2015 – June 2019

COURSES

DevOps Engineer

Skillab

Feb 2025 – Nov 2025

- CI/CD with GitHub Actions; Linux administration and Bash scripting; Docker; intro to Kubernetes; Python development for REST API. Deployment in Cloud.
