

OVIDIU SUCIU

Full-Stack Developer & AI/LLM Integration Engineer

@ ovidiu.suciusoc@gmail.com +40 771 440 283 Cluj-Napoca, Romania
in ovidiu-suciu-cristian socovidiu my-website

PROFILE

- Full-stack developer with experience building modern web applications using React, TypeScript, Node.js, .NET, and FastAPI; strong focus on clean architecture, modular design, and scalable backend systems.
- Hands-on DevOps practitioner with experience in containerization, CI/CD pipelines, GitHub Actions, Docker, Terraform, and Kubernetes; passionate about automation and cloud-ready deployments.
- Software engineer with 6+ years of experience across embedded and automotive systems, recently transitioning into modern web, cloud, and AI-powered application development.
- Experience building AI-powered applications, including multi-provider LLM integrations (OpenAI, Gemini, Anthropic).

PERSONAL PROJECTS

Resume Builder Platform – K8s Infrastructure

Kubernetes, Helm, Terraform, GitHub Actions, GCP

📅 2025 📍 GitHub

- Provisioned GKE and supporting cloud resources using Terraform; packaged each microservice as a Helm chart for repeatable deployments.
- Defined namespaces, ingress, secrets and workloads for frontend, API and LLM services, wiring them to a managed MongoDB instance.
- Automated build-and-deploy pipelines with GitHub Actions, pushing images to Artifact Registry and running helm upgrade -install into the target cluster.

Resume Builder API

.NET, MongoDB, Docker

📅 2025 📍 GitHub

- Built a .NET Web API providing REST endpoints for user management and CV CRUD operations backed by MongoDB.
- Implemented authentication and authorization ensuring users can only access and modify their own resumes.
- Containerized the service and added docker-compose for local development together with the frontend, database, and LLM service.
- Integrated with a separate LLM microservice via HTTP-based RPC endpoints to provide AI-powered resume feedback and suggestions; designed request/response models for structured prompt delivery.

Resume Chatbot LLM Service

FastAPI, LangChain, OpenAI/Ollama, Docker

📅 2025 📍 GitHub

- Developed a FastAPI microservice that exposes chat endpoints for AI-assisted resume feedback and suggestions using LangChain.
- Designed a configurable provider layer to switch between OpenAI and local Ollama models via environment variables without code changes.
- Used Pydantic models and automated tests to keep prompts, responses, and resume suggestions structured and reliable.

LANGUAGES

Romanian ● ● ● ● ●

English ● ● ● ● ●

STRENGTHS

Hard-working Detail-oriented
Team player Fast learner Curious

TECHNICAL SKILLS

Programming Languages

Python TypeScript JavaScript
C C# Bash

Frontend

React TailwindCSS HTML
Vite

Backend

FastAPI Node.js Express
.NET REST APIs

Databases

PostgreSQL MongoDB

DevOps & Infrastructure

Docker Kubernetes Terraform
GitHub Actions CI/CD Linux
Monitoring/Logging

Cloud Platforms

GCP (GKE, Cloud Run, Artifact Registry)
Azure AI Services

Runtime & Tooling

Uvicorn Nginx Docker Desktop

Development Tools

Git VS Code PyCharm

AI & LLM Systems

Multi-Provider LLM Integration
OpenAI Gemini Anthropic

Resume Builder Frontend

React, TypeScript, Vite, TailwindCSS, Docker

📅 2025

📍 GitHub

- Created a TypeScript React SPA for creating, previewing, and exporting professional CVs to PDF.
- Implemented dynamic forms with real-time preview backed by the Resume API; integrated Docker + Nginx config for containerized deployment.
- Added basic testing and linting (Vitest, ESLint) to keep the UI codebase maintainable.

Video Game Review Platform

Node.js, Express, React, TS, Tailwind, Docker

📅 2025

📍 GitHub

- Full-stack reviews app with JWT auth and RAWG API integration; backend designed with REST best practices and PostgreSQL indexing.
- Frontend built with React + TypeScript + Vite; multi-service setup containerized with Docker for streamlined dev and deployment.

EXPERIENCE

Junior Solutions Engineer

Global Lingo

📅 Feb 2026 – Present

📍 Cluj-Napoca

Developed and integrated AI-powered applications and automation workflows across speech processing, generative AI, localization, and multilingual content production.

- **Speech Transcription & Speaker Diarization — C#, .NET, Whisper, sherpa-onnx:** Developed and improved a desktop transcription pipeline integrating Whisper-based speech recognition with speaker diarization. Investigated transcription and speaker-attribution issues using measured diagnostics rather than model assumptions, identifying application-level heuristics that were degrading transcription quality. Evaluated alternative embedding models and diarization approaches based on accuracy, performance, scalability, and licensing constraints, and implemented human-in-the-loop speaker correction for cases where model performance reached practical limits.
- **AI Workflow Integrations — C#, Blackbird, Google Vertex AI, Gemini, OpenAI, Anthropic:** Developed reusable Blackbird application actions and API integrations for multiple AI providers, including Google Vertex AI, Gemini, OpenAI, and Anthropic, enabling AI-powered translation, content generation, review, search, and batch-processing workflows. Implemented authentication and connection validation, request/response processing, polling, error handling, and reusable client components to support reliable and maintainable integration of external AI services into enterprise automation workflows.
- **Multilingual Voiceover Generator — Python, PySide6, Azure Speech, ElevenLabs:** Built a desktop application for converting multilingual Excel-based scripts into structured MP3 voiceover content. Integrated multiple TTS providers with voice assignment, SSML customization, pronunciation rules, speed controls, and inline pause/join markup. Implemented asynchronous audio generation, progress tracking, persistent project state, error handling, automated testing, CI workflows, and Windows packaging.
- Built and maintained automated test coverage around production workflows, including regression tests derived from real transcription and diarization issues, helping validate new processing rules before integration.

- Applied an evidence-driven approach to AI engineering, benchmarking model alternatives and processing strategies for accuracy, execution time, licensing suitability, and real-world behavior rather than assuming larger or newer models would provide better results.

Software Architect

AROBS Transilvania Software

📅 May 2021 – Sep 2024

📍 Cluj-Napoca

- Designed modular AUTOSAR-aligned architectures for safety-critical automotive systems (ASIL-B), defining OS task layouts, memory maps, reset flows, ports, and RTE interfaces.
- Led architectural design for sensor clusters and fuel-operated heater control units; implemented diagnostics, ECU management, communication handlers, and peripheral drivers.
- Ensured ASPICE Level 2 compliance through requirements traceability (Polarion - Rhapsody), structured documentation, and stakeholder technical reviews.
- Worked closely with cross-functional teams (HW, QA, systems engineering) to define design specs and integrate components into production ECUs.
- Tools: Rhapsody, Eclipse, Tresos, Davinci Developer/Configurator, Vector CANoe/CANape, ReqXChanger, EWM, Trace32.

Software Developer

AROBS Transilvania Software

📅 Jul 2018 – Sep 2024

📍 Cluj-Napoca

- Developed embedded automotive applications in C with a focus on safety, static analysis, MISRA compliance, and robustness for mission-critical ECUs.
- Implemented service modules such as watchdog management, transport protocol, diagnostic services, and data acquisition pipelines.
- Built prototypes on ARM-based platforms; integrated LiDAR and ultrasonic sensors for mobile robotics and computer-vision research initiatives.
- Conducted debugging and performance optimization, and supported early defect detection improving system reliability.
- Tools: Eclipse, Trace32, ASTREE, Vector CANoe/CANape, Linux scripting, Python automation.

EDUCATION

M.Sc. Integrated Communication Systems

Technical University of Cluj-Napoca

📅 Sept 2019 – June 2021

B.Sc. Electronics, Telecommunications & IT

Technical University of Cluj-Napoca

📅 Sept 2015 – June 2019

COURSES

DevOps Engineer

Skillab

📅 Feb 2025 – Nov 2025

- CI/CD with GitHub Actions; Linux administration and Bash scripting; Docker; intro to Kubernetes; Python development for REST API. Deployment in Cloud.
